SUMMARY

Mathematics with Artificial Intelligence student with hands-on experience in Data Analysis and Machine Learning, along with data cleaning, visualization, and dashboard development using Python, SQL, Excel, Power BI, Tableau, and Scikit-learn. Experienced in exploratory data analysis, data preprocessing, feature engineering, Machine Learning model development, evaluation, cross-validation, and hyperparameter tuning. Built end-to-end projects across e-commerce, entertainment, airline, gaming, and Machine Learning datasets. Seeking an opportunity to contribute analytical, technical, and Machine Learning skills in a Data Analyst role.

EDUCATION

BS, University of Wah

'25 — Present
Wah Cantt, Pakistan

- Mathematics with Artificial Intelligence at University of Wah

PROJECTS

US Airline Flight Routes & Fares Analysis | Tableau, Personal Project [Link](#)

- Developed an interactive Tableau dashboard analyzing 245K+ US airline flight records from 1993–2024. Analyzed passenger volume, fare trends, airline performance, expensive routes, and distance-based pricing. Created calculated fields, KPI cards, interactive filters, and data visualizations to identify meaningful insights. Used Tableau and Excel to transform raw airline data into an interactive analytical dashboard.

Netflix TV Shows Analytics | Python & Power BI, Personal Project [Link](#)

- Conducted end-to-end analysis of approximately 16,000 Netflix TV Show records using Python and Power BI. Cleaned and transformed data using Pandas and Power Query, including missing-value handling, duplicate removal, and feature engineering. Performed EDA using Pandas, NumPy, Matplotlib, and Seaborn to identify trends in releases, countries, languages, ratings, popularity, and seasons. Developed an interactive Power BI dashboard using DAX, KPI cards, charts, and slicers to visualize key business insights and trends.

Pakistan E-Commerce Sales Analysis | Advanced SQL & Power BI, Personal Project [Link](#)

- Developed an advanced SQL analytics project using MySQL to analyze Pakistan's e-commerce sales data. Performed data exploration, validation, sales, product, category, customer, payment, and discount analysis. Applied advanced SQL techniques including CTEs, subqueries, window functions, LAG(), RANK(), and DENSE_RANK().
- Created a Power BI dashboard to visualize key business KPIs and insights from the SQL analysis.

Global Video Games Sales Analysis | Excel, Personal Project [Link](#)

- Developed an interactive Excel dashboard to analyze global video game sales across genres, platforms, publishers, regions, and release years. Performed data cleaning and analysis using Excel formulas, Pivot Tables, Pivot Charts, and Slicers. Created KPI cards and visualizations to identify top-selling games, genres, platforms, publishers, and regional sales trends. Designed an interactive dashboard to support data-driven insights and performance comparison.

iPhone Resale Price Prediction | Machine Learning | Python, Scikit-learn [Link](#)

- Developed a regression model to predict iPhone resale prices using device condition, model, storage, battery health, and market features. Compared Linear Regression, Decision Tree, and Random Forest, with Random Forest achieving 97.8% R^2 and 5,383 LKR MAE. Used One-Hot Encoding, StandardScaler, Pipeline, Cross-Validation, and GridSearchCV for preprocessing, evaluation, and model optimization.

SKILLS

Data Analytics SQL / MySQL, Excel, Power BI, Tableau

Python Pandas, NumPy, Matplotlib, Seaborn

Data Analysis Data Cleaning, Exploratory Data Analysis (EDA), Data Transformation, KPI Analysis

Data Visualization Interactive Dashboards, Charts, Reports, Data Storytelling

Machine Learning: Supervised & Unsupervised Learning, Preprocessing, Model Evaluation, Scikit-learn
